How Your Shop Will Run

A simple look at the process · Alex Car Restoration · Nov 4, 2026 · @Jig

The big picture

Every car follows the same eight steps, from the first call to the follow-up after it leaves. The system keeps each step in one place, so nobody has to ask around to find out where a car is.

a car's journey · 8 steps, 1 decision

A client who has not agreed stays as a quote. Once agreed, the car moves through the work, a quality check and release, and the shop follows up about a week later.

Who does what

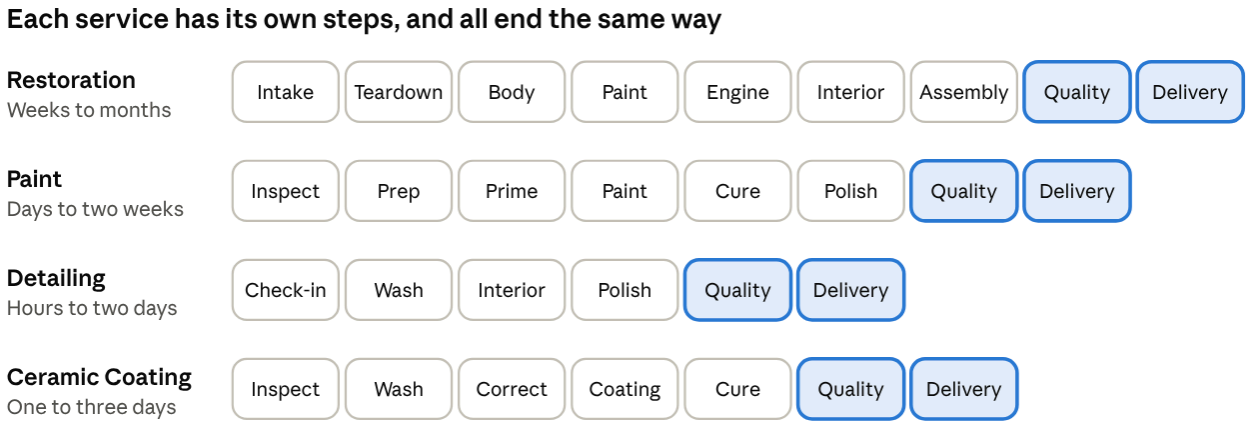

Three logins, one for each job in the shop. Each person sees what they need and nothing more.

Role	Their job	What they see	Can change things
Executive (owner)	Watches how the business is doing and approves stages	Everything, including sales and profit	Yes
Service Advisor	Takes the client from first call to pickup: intake, estimate, payment, texts	Everything except sales graphs	Yes

Role	Their job	What they see	Can change things
Team Leader	Keeps the crew on track day to day	Today's crew, tasks, schedule and attendance	No, view only

The four services

Each service has its own steps, shown here as they run in the system. Every one ends the same way: a quality check, then delivery.

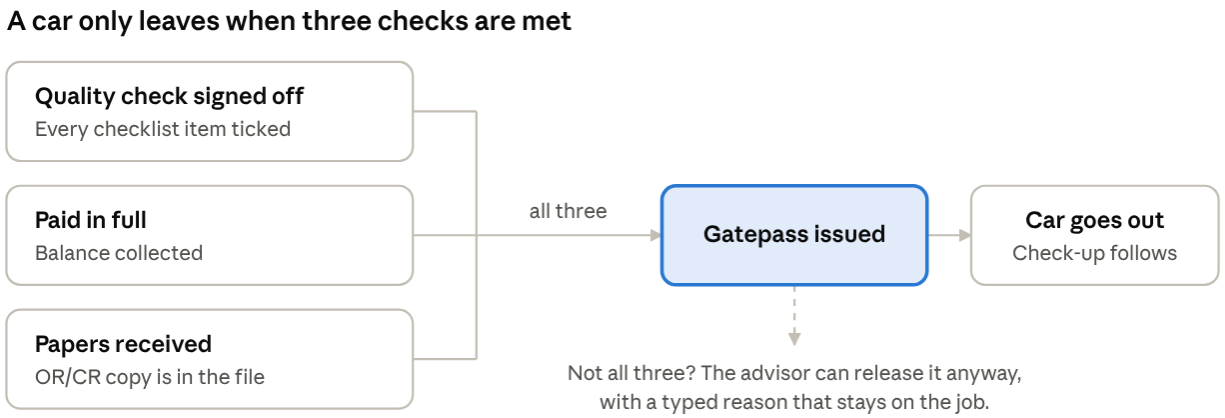

four services · steps side by side

The times are typical. A restoration can run for months, while a detail is done in a day. The steps can be changed to match how your shop really works.

Checks built in

The system holds a car back until the basics are done, so nothing slips through at the last minute.

release gate · 3 checks before the car leaves

- **Stage approval:** each finished stage is approved by the owner or the service advisor, with the date.
- **Papers and items:** anything missing at check-in is flagged on the job until it is sorted.
- **Follow-up:** a week after the car leaves, the shop is reminded to check in with the client. A low score offers to open a back job.

What you see each day, and next steps

The first page is a quick read of the whole shop: a score for how jobs are going, the cars in the shop with their crew and days left, what is blocked, and what is late. A daily summary can be copied into a message for the team.

To get started, we need three things from you:

1. Tell us which steps above do not match how your shop works, and we will change them.
2. Send your price list, your staff and roles, and a sample of the forms you use today.
3. Name one person who can answer our questions during the build.
